**BUDDING BIOLOGIST
TY PROGRAMME**

APC BUDDING BIOLOGISTS

"The week really highlighted to me that even though science is thought of as one career, there is an infinite number of careers that STEM from it"

Grace O'Sullivan (TY 2017)

Are you thinking of a career in science?

If so, the Budding Biologist TY programme might help you decide if its an interesting career for you.

The programme gives TY students a taste of what it is like to be a researcher in the biological sciences. This varied week features workshops, tutorials and hands on laboratory sessions in subjects including Microbiology, Physiology, Anatomy, Food Science and Biochemistry as well as a lively debate on a topical science issue.

Throughout the week students are given lots of opportunities to meet with scientists working in the biological sciences at various stages of their careers.

Students are encouraged to ask lots of questions and challenge their understanding of a career in science.

A number of past participants have embarked on careers in the biological sciences based on their experience on the Budding Biologist programme.
